We package your products!

Number one for global solutions in packaging by spiral wrapping systems for the plastic industry

maximum productivity — maximum product protection

Standard and Custom designed solutions for the plastic industry

Packaging by spiral wrapping for long shaped products and for coils:
Starting with semi automatic standard machines up to fully automatic packaging lines consisting of:
- bundle forming
- bundle consolidation
- wrapping machine
- sealing of last wrapped layer
- transport systems
- automatic edge protection
- automatic bottom feeder or Powerprestretch systems

You have the packaging need — we package your product
H. BÖHL — for better protection of long shaped products and coils with packaging by spiral wrapping

H. BÖHL wrapping machines use environmentally friendly packaging materials.

- Paper (crepe paper, paraphine paper, laminated paper, coated paper etc.)
- Film (PE stretch film, PE plain film, VCI film)
- Others (hessian, woven PP and PE, adhesive tape, printed packing material)

Optimum packaging quality at the lowest cost is the end result.

As an option all machines can be supplied with multiple packaging adapters. That means our machines are able to apply different packaging materials in one working step.

Powerprestretch system allow us to apply the stretch film with up to 400% prestretch and a total control of the lay on force during the wrapping cycle. These systems guarantee a short return of investment to our customers. World wide satisfied customers are proof of our long term lasting quality.

Our machine design with automatic product height registration to secure a constant lay on force in combination with the memory effect of stretch film maintains the high tension and stability of the unit, even where a pack shrinks as the product cools. And unlike steel strap, no retension is required which eliminates labour, waste and extra material costs.
For drip irrigation reels, drums or other types of coils - The H.BÖHL wrapping machine protects your goods. Inline solutions in combination with a coiler or semi automatic machines for manually loading and unloading. Specially designed conveying systems for different product sizes and a lot of options will guarantee the required packaging demand.

Packing by spiral wrapping ...
The ultimate answer for an optimum protection of your drums and reels

Automatic coilwrapping through the eye ...
The ultimate answer for an optimum protection of your coils

From the simplest configuration to the most complex, our new generation of wrapping machines can be customised to your needs. Also, there are several options which can be added to cover specific customer’s requirements. Horizontal coil position, vertical coil position, automatic handling, loading by hand by forklift or by crane. Our wrapping machines are flexible and can use a big range of eco-friendly packaging materials. We are ready to provide you a complete package.

Coil eye to the sight or eye to the sky. There is always an answer. As well the stand alone solution and the inline solution is possible with our different machine types.
A constant and high lay on force of the packing material is the most important issue to get the best packaging result. This can be guaranteed with our systems.
We package your products!

H. BÖHL Stretch wrapping systems for profiles and tubes

Fully automatic JUNIOR/S-450VA with 125 mm filmwidth
Inline solution for fully automatic packaging
Semi automatic BS8-45 SX-2 with 125 mm filmwidth
Highspeedsolution with 250 mm filmwidth

H. BÖHL customized for the plastic industry

Automatic packaging for pipe bundels
Special application for drums and reels
Inline Solution for packs with 6-side packaging
Packaging with Power Prestretch for Film Tension up to 400%.

H. BÖHL through the eye Coilwrapping solutions

Horizontal wrapping machines for coils. Semi- and fully automatic solutions for a weight up to 10t
Vertical wrapping machines for crane or forklift truck loading Semi- and fully automatic solutions
Vertical wrapping of huge coil dimensions
Special application for tyres
